# Before Operating Your Washer

**Read your Owner's Guide.** It has important safety and warranty information. It also has many suggestions for best washing results.

A WARNING To reduce the risk of fire, electric shock, or injury to persons, read the IMPORTANT SAFETY INSTRUCTIONS in your Owner's Guide before operating this appliance.

## Operating Steps

Read Washing Procedures in your Owner's Guide. It explains these operating steps in detail.

- 1. Sort laundry into loads that can be washed together.
- 2. Prepare items for washing.
- 3. Pretreat stains and heavy soil.
- 4. Add the measured amount of detergent to wash tub.

- If desired, add liquid bleach to Bleach Dispenser.
- 6. Add laundry load to wash tub.
- 7. If desired, add liquid fabric softener to Fabric Softener Dispenser.
- 8. Set cycle selector and washer controls according to type, size, and soil level of each load.
- 9. Close lid and pull cycle selector knob to start washer. The lid must be closed to agitate or spin. The washer will automatically turn off if the lid is lifted during agitation. For your safety, the lid locks when the tub is spinning.
- **10. Remove items at end of cycle.** Wait about 2 minutes for safety lid lock to release.

## Cycle Selection

Always follow instructions on fabric care labels. The Regular, Perm Press and Delicates cycles provide a spray rinse during the first spin, followed by a deep rinse and final spin.

#### Regular Cycle

This cycle provides up to 15 minutes of normal wash agitation followed by a fast spin for most fabrics.

## Extra Rinse Cycle

Use the Extra Rinse cycle after a complete wash cycle when an additional rinse is desired. It provides 3 minutes of rinse agitation, followed by a spin at the selected wash water temperature.

Select **Automatic Extra Rinse** to automatically advance to the Extra Rinse cycle after the Regular cycle is completed.

## Perm Press Cycle

This cycle provides up to 12 minutes of normal wash agitation followed by a fast spin for cottons and blends with a no-iron finish.

Select the **Perm Press Prewash** setting to help loosen soil and remove stains before washing. Add recommended amount of detergent and other laundry

Printed in U.S.A.

## Cycle Selection (continued)

products desired to tub. Add load. Select a cold water rinse, appropriate load size and fast agitation speed. Load will agitate 4 minutes, drain and spin. Follow Perm Press Prewash with a complete Perm Press cycle.

### **Delicates Cycle**

This cycle provides 6 minutes of gentle wash agitation followed by a slow spin for knit and delicate items.

#### Soak Cycle

- Use Soak to treat heavily soiled or stained items. Soak provides 3 minutes of agitation and 12 minutes of soaking time. The load then advances into the Prewash portion of the cycle.
- Use the amount of detergent recommended for a normal wash cycle. If desired, use bleach or a soaking agent for colorfast items.
- The Soak water temperature is the same as the rinse water temperature selected.
- Set the Power Clean to OFF.
- Follow Soak with a complete wash cycle using the normal amount of detergent.

### Prewash Cycle

- Use Prewash when soaking is not necessary. Prewash helps remove protein-based stains such as milk, grass and blood. It also helps loosen soils before washing. During Prewash, the washer will agitate the load for 3 minutes, then drain, spin and shut off.
- Use the amount of detergent recommended for a normal wash cycle.
- The Prewash water temperature is the same as the wash water temperature selected. To avoid setting protein stains, select cold water.
- Set the Power Clean to OFF.
- Follow Prewash with a complete wash cycle using the normal amount of detergent.

#### **Power Clean**

Select Power Clean to automatically advance a load from the Soak or Prewash setting into the Regular wash and Extra Rinse cycles.

- 1. Add the measured amount of detergent to the wash tub, then add wash load.
- 2. Select appropriate Wash/Rinse Temperature, Load Size, and Agitate/Spin Speed.
- 3. Select Power Clean.
  - To use a cycle other than Regular after the Soak or Prewash settings, select OFF and manually advance cycle selector to cycle desired.
- Fill fabric softener dispenser with the recommended amount of LIQUID detergent. Add water to bring liquid level to fill line on dispenser cap.
  - When selecting Power Clean, the fabric softener dispenser must be filled with diluted liquid detergent at the beginning of the Soak or Prewash setting. The detergent for the Regular cycle will then be dispensed after the spin in Prewash.
  - **DO NOT** use powdered detergent in the dispenser.
  - Clean the fabric softener dispenser thoroughly after each use. Fabric softener and liquid detergent should not be mixed.
- Set the cycle selector at Soak or Prewash and pull knob to start. The washer will provide Soak or Prewash as selected. It then automatically advances to the full Regular cycle and Extra Rinse cycle.

#### **Automatic Extra Rinse**

Select Automatic Extra Rinse to provide an extra rinse at the end of the Regular cycle.

#### Controls

Always follow instructions on fabric care labels. WATER TEMPERATURE sets water temperatures for washing and rinsing. Select wash water temperature according to fiber content and soil level of the load, and type of detergent used. A cold water rinse saves energy and reduces wrinkling.

The following chart suggests wash/rinse temperatures for basic fabric types.

Fabric Type	Wash/Rinse Temperature
Heavily soiled white/colorfast cotton, perm press	Hot/Cold
Lightly soiled white/colorfast cotton, perm press	Warm/Cold
Noncolorfast fabrics, knits, delicates	Cold/Cold
Washable woolens	Warm/Cold

**WATER LEVEL** sets the amount of wash and rinse water for the wash load. Select a water level appropriate for the load size. There should be enough water for items to move freely.

 To increase water level after the wash cycle begins, turn the Water Level control to Reset and hold. When water begins to enter the tub, turn the control to the desired setting.

## Energy Saving Tips

- Wash full loads. Oversize loads use extra energy. Undersize loads waste energy.
- When small wash loads cannot be avoided, use lower water levels.
- Select the appropriate cycle and time for each load. Shorten wash times for lightly soiled loads.
- To reduce drying time, select a wash cycle with a fast spin speed to remove more water from heavy items such as towels and jeans.
- Use warm water to wash most loads. Limit hot water washes to heavily soiled and white loads. Use cold water for lightly soiled items and rinsing.
- Operate the washer in early morning and late evening when utility demands are low.
- Follow proper laundry procedures to avoid rewashing.
