

The fan motor connector on the enclosed part is different than the original motor connector. To enable this part to be installed, the motor harness from the original part must be transferred to the new part by completing the following steps:

1. Remove the housing cover from the old motor assembly.
2. Disconnect the wire harness at the old motor.
3. Remove the housing cover from the new motor and discard the new motor harness.
4. Connect the old motor harness to the new motor, reassemble the housing and connect the motor to the cabinet harness.
5. Install the replacement evaporator cover assembly and check operation
